

Evidence Based Relaxation Therapy and Psychoneuroimmunology.

Evidence-based, non-invasive, easy to implement techniques for teaching to clients.

Relaxation Therapy is evidence-based, efficacious, non-invasive and cost efficient.

Simple techniques such as deep diaphragmatic breathing, guided imagery and progressive muscle relaxation can increase physiological and psychological health. Relaxation can improve pain, sleep disorders, depression, anxiety, wound healing, cognitive function and post-traumatic stress disorders. Relaxation can increase alpha and theta brainwaves, decrease heart rate and respiration, reduce production of stress hormones such as corticosteroids and improve a range of immune functions.

Psychoneuroimmunology (PNI) examines links between behaviour, neural, endocrine and immune function and their impact on health. PNI is the science of mind / body connections and offers a framework to understand that psychological conditions and physical health are intimately linked.

This unique one-day seminar identifies the latest evidence that demonstrates specific connections between thoughts, emotions and health.

It includes theoretical, scientific components, practical sessions in relaxation techniques and encourages successful implementation of relaxation into clinical practice to enhance patients' health and wellbeing.

Participants receive up-to-date handouts, review recent peer-reviewed studies in PNI and Relaxation Therapy, view relevant film clips, practise relaxation techniques and learn to effectively teach relaxation techniques to patients.

Learning objectives of this training:

1. Examine latest evidence-based research about Relaxation Therapies and PNI.
2. Identify interactions between CNS, endocrine and immune systems.
3. Identify benefits of Relaxation for conditions such as pain, anxiety, trauma, depression and fatigue.
4. Experience relaxation techniques
5. Demonstrate proficiency in teaching relaxation skills to clients/patients.
6. Understand importance of relaxation for self-care, stress reduction and burn-out prevention.

Dr Judy Lovas is an experienced speaker in Psychoneuroimmunology and Relaxation Therapy, with an approach that is both scientific and holistic. Judy is passionate about teaching health professionals how to successfully implement simple Relaxation techniques into their clinical practice, to improve patients' health and wellbeing.

Judy's dynamic presentations explain the art and science of Relaxation Therapy. In our increasingly fast paced world, everyone needs to relax, yet few know how. Judy's extensive experience in teaching, clinical practice and research, enables her to offer important insights into the role of relaxation for stress related conditions such as anxiety, depression, PTSD, fatigue and pain. Join Judy in her unique presentations that include both theoretical and practical components and learn Relaxation to enhance your professional practice and increase your self-care skills.

This training may qualify for Focussed Psychological Strategies (FPS) CPD. Please refer to the Dept. of Health <http://www.health.gov.au/internet/main/publishing.nsf/content/mental-ba-focus#cpd> for more information.

MELBOURNE: 31st October 2020
MANTRA ON RUSSELL

SYDNEY: 27th June 2020
UTS SHORT COURSE ROOMS

Our continuing professional development events meet the quality standard recognised by many relevant professional associations including psychology, social work, occupational therapy, mental health nursing, community work, counselling, psychotherapy and more.

We recommend checking with your association for the correct calculation of points for this event.

A certificate of attendance for 7 hours of face-to-face training is issued in the week following attendance at this event.

Morning Session

Includes a short morning tea break.

Introduction to Relaxation and Psychoneuroimmunology.
Review evidence of interactions between neural, endocrine and immune systems.
PNI, stress-related conditions and stress-induced immunomodulation.
Deep, Diaphragmatic Breathing (Theory and Practical).
Clinical applications of Deep, Diaphragmatic Breathing (Practical).
Relaxation, immunomodulation and efficacy in pain, fatigue and mood disorders.

Afternoon Session

Includes a short afternoon tea break.

The importance of Relaxation Therapy in your own self-care routine.
Guided Imagery (Theory and Practical).
Clinical applications of Guided Imagery (Practical).
Combining deep diaphragmatic breathing and guided imagery.
Progressive Muscle Relaxation (Theory & Practical).
Clinical applications of Progressive Muscle Relaxation (Practical).
Clinical relevance of Psychoneuroimmunology.
Evaluation and closing.

“This unique seminar offers the art and science of evidence-based Relaxation Therapy to enhance patients' health & your clinical practice.”

Dr Judy Lovas

How will you benefit from attending this training?

- Understand the science of PNI that supports Relaxation Therapy.
- Benefit professionally by teaching patients simple, effective Relaxation.
- Benefit personally by learning Relaxation techniques.

Registration details:

Registration fee: **\$298** (includes an art kit for use on the day and for future client work)
A current PDP 'Student and New Graduate' discount code may be applied to this standard registration fee. (Apply online)
This seminar provides 7 hours for CPD points.
Morning tea, lunch and afternoon tea included.
We accept payment by Visa, Mastercard, Amex PayPal, cheque and EFT.
